

OUR BUSINESS

Founded in 2016, our incredible team of developers, designers and testing experts has worked tirelessly to bring AppRays Private Limited to the forefront.

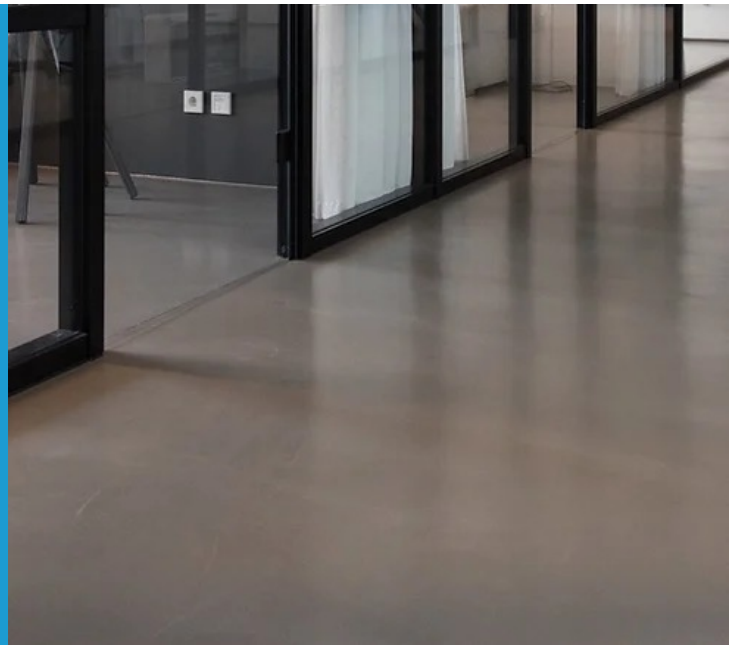

In order to provide excellent solutions, we dedicate time and resources to research the market needs and our users' habits and motives. Our aim is to help our client through every phase of the development process and make their digital product a success.

Some key steps of this process include:

- Professional analysts to audit client's idea/idea validation
- Step-by-step strategizing of client's targets till deployment
- Clear and constant communication as needed
- Transparency about the allocation of resources
- Efficient and timely delivery of product

Get in Touch

SERVICES

We are a software company that develops digital products ranging from app development to web design specifically tailored to suit our customer's requirements. Here is how we can help.

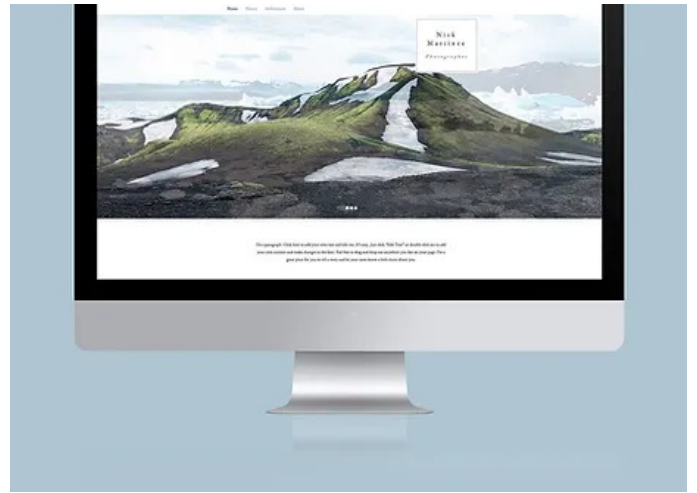

MOBILE APP DEVELOPMENT

We are using cutting edge technology like Flutter and Firebase to create top-notch apps that bring our customer's business ideas to life and solve user's problems whilst also providing them with a user-friendly experience.

WEB DEVELOPMENT

Our tech savvy team members are experts at using popular framework such as HTML5, CSS3, Bootstrap and ReactJS to develop engaging websites that use modern designs to give an intuitive user experience.

FAQ'S

What You Need to Know

HOW LONG DOES
SOFTWARE DEVELOPMENT
TAKE?

WHAT ARE THE BENEFITS
OF WORKING WITH
APPRAYS?

WHAT TECHNOLOGY DO WE
USE?

The estimated time frame for each project depends on its complexity. It could take from 4 weeks to up to a year depending on the client's requirements.

After creating a detailed report of our client's requirements, our expert team makes sure to provide excellent products to empower your business. We have trained and committed managers that ensure quality control and timely delivery.

We use popular front-end framework such as Flutter, React, which are required for the modern development. In the backend, we use firebase and Django which are powerful.
